## INNOVATION HUB

Accelerate your progress at Quasset Innovation Hub, a central place where companies can co-locate, collaborate and utilize a test facility with real-world assets.

Quasset Innovation Hub provides a fully-inclusive solution to companies who are driving the industry forward, developing disruptive field-ready robotic solutions at the heart of the digital transformation of critical infrastructure.

### QUASSET INNOVATION HUB: OFFICE SPACE & TEST FACILITY

**Quasset Innovation Hub combines a 6,000 square foot office space with 3,000 square foot warehouse which functions as a test facility.** The ceiling height of Quasset Test Facility (QTF) is 22 feet, providing ample space for testing indoor drones. There are five co-locating offices that are available for commercial rental. Amenities that are available to companies that co-locate to Quasset Innovation Hub include a large conference room, small conference room, a kitchen and canteen, ample parking, and an extended outdoor area. With access to both conference spaces and a test facility, Quasset Innovation Hub is an ideal space for companies who would like to hold workshops, access samples in the test facility, and give demonstrations of new technologies.

**Quasset Test Facility (QTF) provides the vital bridge between lab environments and real-world applications to safely test and validate novel solutions.** Robotic and other new technologies can be tested on real-world assets in a safe and controlled setting. From start-ups to leading oil and gas companies and service providers, everybody now has the opportunity to accelerate in our technology development and deployment center.

**An independent testing facility, QTF will house a range of decommissioned assets which will facilitate the experimentation and validation of robotic solutions for inspection and maintenance.** Assets in the testing facility will include decommissioned pipe samples in various diameters, wall thicknesses, seam types and grades. A simulated storage tank will also be accessible on site, for evaluating performance of robotic platforms assessing tank floors for metal loss and cracks, as well as a decommissioned pressure vessel to facilitate applications of robotic platforms and sensors for integrity assessments.

## QUASSET

**Quasset Innovation Hub is spearheaded by Quasset**, a fast-growing, international company that provides modern asset management solutions to companies managing capital-intensive infrastructure. Quasset has four locations around the world: the Netherlands, Philippines, Singapore and the United States; as well as Quasset Test Facility (QTF) which is located outside of Amsterdam. Quasset Innovation Hub is the newest addition to Quasset initiatives around the globe.

Since its inception, Quasset has been part of several joint industry projects, pulling the value chain together to help companies accelerate progress and create a competitive advantage. Quasset supports clients in optimizing the balance between cost, performance and risks of capital-intensive infrastructure such as water distribution systems, roads, pipelines, and petrochemical plants, developing inventive products for asset management information and business intelligence on the basis of 3D and mixed reality technologies.
